Project Design Phase-I
Solution Architecture

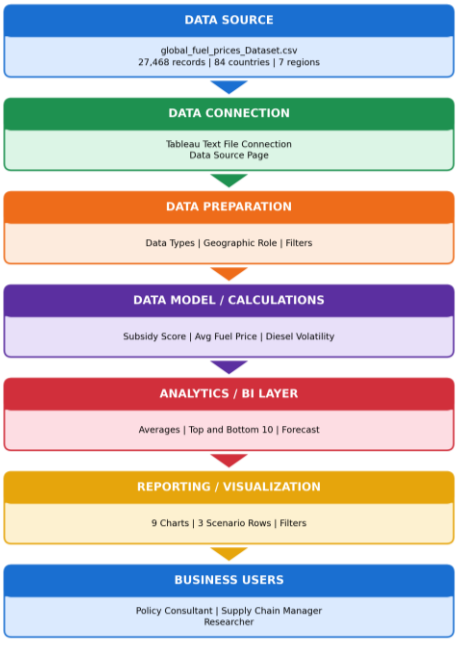

Date	19 September 2026
Team ID	[Enter Team ID]
Project Name	Global Fuel Prices and Taxation Analysis (2020 to 2026)
Maximum Marks	4 Marks

Solution Architecture:

Solution architecture is a complex process – with many sub-processes – that bridges the gap between business problems and technology solutions. Its goals are to:

- Find the best tech solution to solve existing business problems.
- Describe the structure, characteristics, behavior, and other aspects of the software to project stakeholders.
- Define features, development phases, and solution requirements.
- Provide specifications according to which the solution is defined, managed, and delivered.

Sample Solution Architecture Diagram:

Component Description Table

Component Name	Description / Role in Architecture	Technology Used
Data Source	Fuel price, tax and subsidy records for 84 countries from 2020 to 2026	CSV file (global_fuel_prices_Dataset.csv)
Data Connection	Loads the CSV file into the analytical environment	Tableau text file connection
Data Preparation	Sets data types and geographic role; applies filters	Tableau Data Source page
Calculations	Creates Subsidy Score, Avg Fuel Price and Diesel Volatility fields	Tableau calculated fields
Analytics	Aggregates by region, year and income level; ranks top and bottom 10; forecasts diesel price	Tableau Desktop (forecasting)
Dashboard	Shows 9 charts in three scenario rows with year filter and click-to-filter	Tableau dashboard, Tableau Public
Business Users	Policy consultants, supply chain managers and researchers who read and filter the dashboard	Web browser or Tableau Public viewer
