Project Name	Global Fuel Prices and Taxation Analysis (2020 to 2026)
Maximum Marks	5 Marks

By using stories in Tableau, you can effectively communicate complex data in a way that is both interactive and engaging, making it easier for the audience to follow along and understand the insights. It's a tool for **data storytelling**, allowing you to present insights in a cohesive, engaging way that takes viewers through a logical progression of findings or analyses.

In Tableau, **Story** is a feature that allows you to create a sequence of dashboards, visualizations, and text to present data insights in a cohesive and narrative-driven way. It's like a slideshow within Tableau that guides the audience through a series of data points, helping them understand key insights, trends, or outcomes of your analysis.

Observations:

- **Tax Policy Differs Across Regions:** Oceania has the highest average fuel tax (38.7%) and South America the lowest (18.2%).
- **Subsidies Lower Prices:** Average fuel price is about $3.09 per liter at low subsidy, against $0.13 at very high subsidy.
- **Diesel Prices Are Rising and Uneven:** The yearly average rose from $1.39 per liter in 2020 to $2.47 in 2026. Hong Kong is the most expensive market ($5.10) and Venezuela the cheapest ($0.02). The Middle East is the most volatile region.
- **Income Level Shapes Policy:** High-income countries have the highest tax (34.7%) and petrol price ($3.55 per liter), against $1.39 for low-income countries, and 87.5% of their records have low subsidy.
